FRAMEWORK ACOUSTIC CEILING PANELS

PET Acoustic felt is now being accepted as one of the standard new materials in the commercial and residential industry for acoustic, thermal and visual design. It is a strong and durable material made out of recycled plastic bottles and is itself recyclable making it a green and sustainable product with the added qualities of heat insulation and noise absorption.

PET felt is a very versatile material available in many colours and provides a wide range of solutions and can be compressed into extra durable flat sheets or moulded into a wide range of solutions including panels, systems, partitions and wall coverings. It can cover almost anything except the floor. It can be customised to fit a large variety of spaces and configurations.

One of these solutions is the decorative FRAMEWORK ACOUSTIC CEILING PANELS available in different colours which enables one to reduce echo's and reverberations within a space or room. Adjoining surfaces with sound absorbing material reduce reverberations fast.

Framework ceiling frames are available in both “OPEN” and “CLOSED” and comes in an array of sizes and colours.

OPEN TOP ACOUSTIC CEILING FRAMES

Framework open ceiling designs offers soundproofing benefits while preserving open ceiling aesthetics, perfect for complimentary existing ceiling components like lighting, sprinklers and speakers.

CLOSED TOP ACOUSTIC CEILING FRAMES

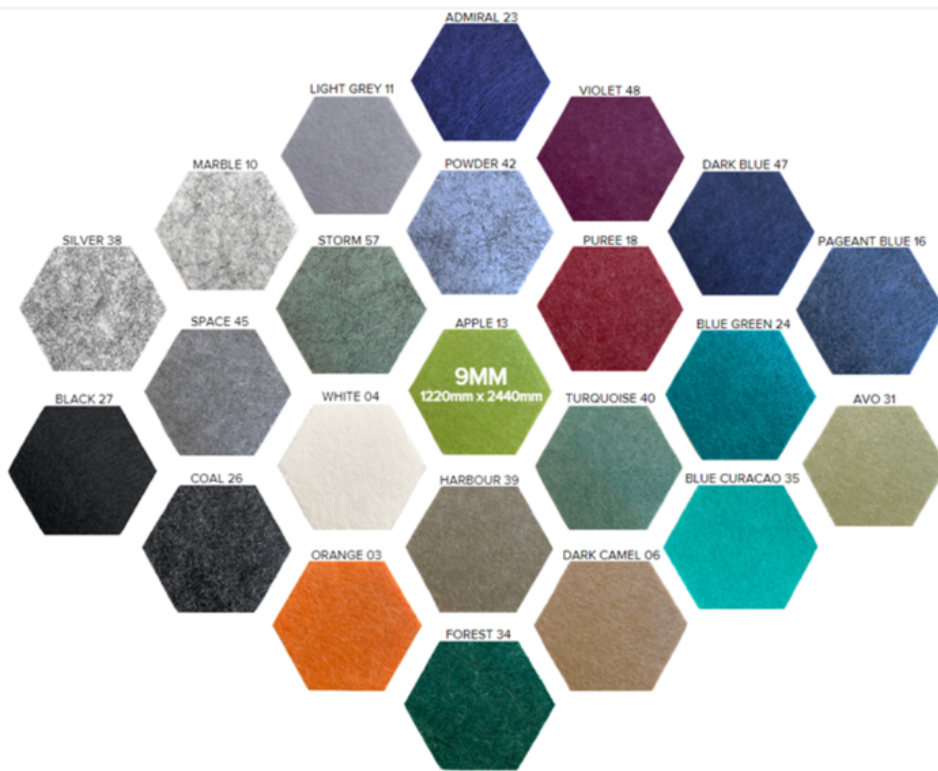

The closed top design is a full coverage system with a large surface area, ideal for concealing duck work, cabling and other ceiling features while offering superior acoustic performance.

The framework panels are available in 1200x1200 mm or 2400x2400 mm modules but they can also be **custom made** to the size of your requirements.

In addition they can be **fixed** to the ceiling OR be **hung as baffles** with aluminium strings.
